

KeepCool II

Update of the KeepCool toolkit

One experience with using the KeepCool toolkit was that concrete product information along with the theoretical descriptions would be very helpful in order to implement our recommendations. This information will be researched and included into the toolkit. In addition, the reports and best practice examples from the other work packages, as well as the information material in national languages will be added to the toolkit.

Descriptions of available products

The trade organisations and specialised institutes KeepCool II is working with provide brief summaries from recommended products within their portfolios. A pre-defined template ensures that these summaries will fit into the toolkit, and that they provide the same information (e.g. photo, where to buy, technical features etc.). The summaries will be delivered in a compiled report.

Inclusion into the toolkit

The product summaries will be included into the toolkit, as well as the results of the work packages 2, 3, and 4, and the national information material from work package 6.

Outcome of this work package

Toolkit allowing target groups to back up their decisions with concrete product information.
